Bruno Pompeu, Instituto Europeo di Design, Brasil

ABSTRACT

This text reports an experience lived by its authors in the classroom environment, by means of which it reached an unusual approach between a more theoretical and abstract discipline - semiotics - and another more technical and practical one - geometry. From the union of distinct kinds of knowledge in an interdisciplinary work, it was possible to bring tangibility to semiotic theory, usually away from the students environment, while it could add depth and relevance to geometry, sometimes associated only with technical procedures.
